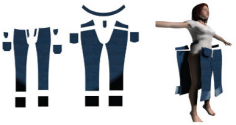
TUKA 3D

by TUKA

Make your samples digitally.

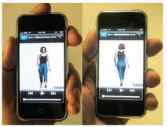


Go digital.

Imported 2D CAD patterns are digitally sewn into a 3D garment, then draped onto a 3D virtual fit model that can be created using actual scan data of your real fit model.

Animate.

Does it fit? Tension mapping and X-ray views let you visually see where the virtual garment is loose or tight. Add integrated real-time animation to see how the fabric moves.



Collaborate.

Change styles, patterns, and colors in real-time. Create storyboards, and instantly share them via email around the world, even via iPhone™.
